

DOWNENDERS PICK & PLACE

FEATURES

- Minimizes risks of coil ID marking and telescoping on turnstile arm.
- Push off not needed on turnstile which eliminates marking of ID wraps.
- Ideal for sensitive materials of any gauge or mult width.
- Automatic “double pick” routine for narrow mult widths.
- Floor level installation.
- Magnetic stabilization for narrow mults is available.
- Choice of in-line discharge, or 90 degree discharge.
- Coil width data input by keyboard or bar-code scanner.
- Reliable, consistent operation with user-friendly controls.

This unit is designed to remove slit coils from the turnstile one at a time and down end them into the slit coil packaging line. The unit features the ability to be programmed with all the slit mult thicknesses for one coil by the operator and then it will run in automatic mode until all the slit mults have been removed from the turnstile arm.
