

PROPANE POWERED TRANSFER CAR

Propane powered transfer car for coil handling

Propane powered transfer car can also be used for handling dies and molds.

FEATURES

- Urethane covered wheels rated to run on a level industrial concrete floor.
- Automatically steers following a floor wire.
- Can be operated by attached pendant, remote radio or full automation.
- Propane powered with on-board PLC and equipment that permits the operator to start the engine and move the car from a remote location.
 - Anti-collision sensors stop the unit prior to impact.
 - Auto shut-down of motor when transfer is completed.
- Economic installation. No rails required. Easy to relocate when necessary. Unlimited travel; no power cable needed.
